

Chem12 Oxidation and Reduction : Test 1a - 40

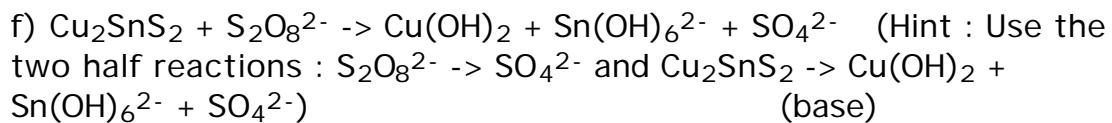

- 1) Define : Oxidation -
- 2)a) A piece of copper is placed in a silver nitrate solution. Write down the balanced net ionic equation (redox equation) for this reaction.
- b) Which species is the oxidizing agent?
- 3) Give the oxidation number of S in the species FSO_3^- ?
- 4) Is this a redox reaction : $2\text{HCl} + \text{Na}_2\text{S} \rightarrow 2\text{NaCl} + \text{H}_2\text{S}$?
- 5) In a redox reaction, the increase in the oxidation number of one species is accompanied by the decrease in the oxidation number of another species. Explain.
- 6) Balance the half reaction : $\text{HNO}_3 \rightarrow \text{NO}_2$ in acid solution.
- 7) Balance the half reaction : $\text{NH}_3 \rightarrow \text{N}_2\text{O}$ in basic solution.
- 8) The four elements; W, X, Y and Z, form diatomic molecules and also form singly charged negative ions. The following observations are made in a series of experiments :
 $2\text{X}^- + \text{Y}_2 \rightarrow 2\text{Y}^- + \text{X}_2$
 $2\text{W}^- + \text{Y}_2 \rightarrow \text{N.R.}$
 $2\text{Z}^- + \text{X}_2 \rightarrow 2\text{X}^- + \text{Z}_2$
Arrange the four balanced oxidation half reactions in order with the strongest oxidizer at the top.
- 9) Predict which reactions are spontaneous. Label S or N.S.
